Key risks: Past performance is not a guide to future performance. The value of fixed income securities will fall if the issuer is unable to repay its debt or has its credit rating reduced. Generally, the higher the perceived credit risk of the issuer, the higher the rate of interest. The Fund may invest in emerging markets/soft currencies and in financial derivative instruments, both of which may have the effect of increasing volatility. Discrete performance data is not available for five full 12 month periods due to the launch date of the portfolio.

^{^^}The amount of income generated for distribution after deducting all expenses. ^{*}Duration is a measure of the sensitivity of the price of a fixed-income investment to a change in interest rates in years.
