

Stuart Steven & Kenny Watson & Aitken Ross

The Fund

The Fund aims to provide a higher long-term return than UK Government Bonds, with most of the returns likely to come from income. The Fund typically invests at least 70% of the portfolio in sterling denominated fixed income securities issued by corporates, governments and supranational institutions. Up to 30% of the Fund can be invested in non-sterling denominated fixed income securities, which are typically hedged back into sterling. The Fund invests only in the bonds of companies that meet the team's rules for environmental and social responsibility.

Key risks: Past performance is not a guide to future performance. Investment in the Fund carries the risk of potential total loss of capital. Investment decisions should not be based on short-term performance. Investment in the Fund involves foreign currencies and may be subject to fluctuations in value due to movements in exchange rates. The value of fixed income securities will fall if the issuer is unable to repay its debt or has its credit rating reduced. Generally, the higher the perceived credit risk of the issuer, the higher the rate of interest.

*Duration is a measure of the sensitivity of the price of a fixed-income investment to a change in interest rates in years. †The Distribution Yield is also the Net Underlying Yield for this fund.
