

Liontrust SF Managed Growth Fund: Q1 2023 review

Fund managers: Simon Clements, Peter Michaelis and Chris Foster

The Fund returned 3.0% over the quarter, outperforming the IA Flexible Investment sector average of 1.6% (which is the comparator benchmark)*†.

Global equities started 2023 on a strong footing as signs of easing inflation in most major economies and China's re-opening supported positive market sentiment. However, sentiment turned in February as resilient economic data suggested that any pause in interest rate rises may still be some way off, with the Federal Reserve, European Central Bank and Bank of England all continuing with rate rises. The collapse of Silicon Valley Bank (SVB) in March led to a major sell-off in the US and European financial sectors, though this market turbulence was short-lived and did not prevent investor optimism leading global equities higher towards the end of the quarter.

As we have stated previously, we do not attempt to forecast or anticipate the macroeconomic developments that we have experienced in the last two years. Our focus is resolutely on our 20 sustainability themes that over the long term should provide strong and stable growth, relatively independent of economic cycles, and on finding those rare companies that harness this positive growth and which generate persistently high returns on capital. In the more muted economic years ahead, we expect the strength of our sustainable themes and the quality of the businesses we invest in will allow for strong performance.

Looking at our top performers over Q1, Spotify led the way during a period in which a number of our holdings released trading updates to market. The audio-streaming platform released a strong Q4 update, reporting fourth quarter subscriber growth and gross margin improvement that was ahead of average consensus. Paid subscribers grew 14% year-on-year to 205 million, with the company stating that this was 3 million ahead of consensus. Looking forward, Spotify said that it sees premium subscribers increasing to 207 million in the first quarter and that monthly active users are expected to grow by 11 million to 500 million.

Spotify fits perfectly into our *Encouraging sustainable leisure* theme as we believe music has been an important component of leisure time and culture for millennia. Listening to music is a fundamentally positive pastime and is key to the human experience; it brings people together and can also be enjoyed alone.

Ansys, the global leader in complex multi-physics real-world simulations, was another strong performer over the quarter following the release of upbeat fourth quarter results and a full-year adjusted revenue forecast of \$2.24 billion - \$2.32 billion that was ahead of average estimates.

Exposed to our *Improving the resource efficiency of industrial and agricultural processes* theme, Ansys's simulation software is essentially a computer programme that allows the user to observe an operation through simulation without physically performing that operation. The virtual testing and monitoring enables higher safety and quality standards in the design, development and maintenance of our products.

Long-term performer Cadence Design Systems put in another strong quarter, making gains following the release of impressive fourth quarter earnings that beat forecasts and contained upbeat outlook comments. Held under our *Improving the efficiency of energy use* theme, Cadence provides electronic design automation, technology that designs and optimises semiconductor chips, which facilitates innovation behind many of our themes related to the digitalisation of the global economy.

Semiconductor firm ASML was another notable performer as strong sub-sector performance combined with a robust earnings release to push the company's share price higher. ASML remains at the forefront of improving semiconductor fabrication through extreme ultraviolet (EUV) development and holistic lithography. Smaller process nodes means more chips per wafer in manufacture and smaller, cheaper, more reliable, more energy efficient and more powerful end products. The company reported net sales in the fourth quarter of €6.4 billion, which was around the midpoint of the company's guidance, while gross margin exceeded previous guidance due to additional upgrades and an insurance settlement from last year.

Another top-performing stock in the semiconductor space was Infineon Technologies after it raised its sales and earnings forecast following stronger-than-expected demand in its core automotive and industrial sectors. The company now sees second-quarter revenue at more than €4 billion, up from an earlier forecast of €3.9 billion, Infineon also expects full-year sales to also be above its previous estimate of approximately €15.5 billion.

Exposed to our *Improving the efficiency of energy use* theme, Infineon produces efficient power management chips, which are used across the economy in electronics, particularly in computing and mobiles as well as autos and industrial automation. It is the largest player in power semiconductors, which are key for electrification, so it is well positioned here.

In terms of detractors over the quarter, the collapse of Silicon Valley Bank (SVB) in March (the second largest banking failure in US history) led to a major sell-off in the US and European financial sectors and a few of our holdings were impacted by the subsequent contagion. Banks in 2023 are very different to those in 2008 – they are better capitalised, better regulated and tend to have more diversified sources of funding. For the SF funds we look to invest in only those banks which demonstrate strong *Financial Resilience* – we did not invest in SVB in any of our Funds.

We note though that First Republic, which we did hold, has seen its shares impacted. First Republic started the year with a stronger credit rating than JP Morgan, and was the envy of the US banking sector. Unfortunately it was swept up in the turmoil associated with Silicon Valley Bank, given its deposit base was primarily in the San Francisco bay area, as was SVB's. Panic ensued as reports of the collapse of SVB hit the news, which saw First Republic's deposit base fall from 155bn to around 70bn over a few days. While the solvency of First Republic was sound, the sharp fall in its deposit base led to higher funding costs, and hurt profitability. We exited the position over the quarter.

Exposed to our *Saving for the future* theme, Charles Schwab was another one of our positions to be negatively impacted by concerns around the collapse of SVB. Shares in the US investment firm fell amid a crisis of confidence in the banking sector with these concerns being further amplified after UBS announced that it was to buy out struggling Swiss lender Credit Suisse.

The market turbulence following the SVB collapse serves as an important reminder of how vital it is to invest in companies with strong balance sheets and good business models; and also to have good diversification across portfolios. Both are key features of the Sustainable Future approach.

Away from the banking sector, our position in Agilent Technologies – a leading provider of instruments, software, services, and consumables for laboratories – was a notable detractor. Exposed to our *Better monitoring of supply chains and quality control* theme, Agilent's products help us ensure the air we breathe, the water we drink and the food we eat is not affected by dangerous impurities. It also has a growing diagnostics business which enables innovation in areas such as gene therapy. Over the period, the company's earnings forecast for the second quarter came in below average estimates..

Portfolio activity was limited over the quarter. Having exited First Republic, we initiated a position in Morningstar under our *Saving for the future* theme. Morningstar provides both quantitative and qualitative research to the investment industry, with databases and analytical tools covering private markets, ESG, credit ratings, equity

valuation, and more. On the client side, they provide software and investment management services to financial advisors and institutions.

Discrete years' performance*, to previous quarter-end
Past performance does not predict future returns
